THE HOLLY SOCIETY OF AMERICA, INC.

The Holly Society of America, Inc., founded in 1947, is a non-profit organization of individuals interested in learning about the genus *Ilex*. The Society provides information for skilled growers as well as novices through publications, meetings, lectures, and visits to holly collections. Local or regional groups of holly enthusiasts are encouraged to establish chapters under the National Society.

The Holly Society funds research and serves as the International Registration Authority for cultivated *Ilex*. The society was appointed Registration Authority in 1958 by the International Commission for Nomenclature of Cultivated Plants of the International Union of Biological Sciences.

Holly Society members receive the *Holly Society Journal*, are invited to participate in the Society's annual meeting, and are notified when special new publications become available. Inquiries about membership as well as orders for back issues of the *Journal* and other Holly Society publications should be sent to the Secretary. Contributions for publication in the *Journal* and inquiries about items published therein should be sent to the Editor.

INTRODUCTION

This cultivar registration list was compiled to bring together in one place all cultivar names formally registered by the Holly Society of America, the International Registration Authority for cultivated *Ilex*. Over the past thirty-five years, these names have been validly published with their appropriate descriptions and historical data in various publications of the Holly Society, and in the case of 'Jermyns Dwarf' and 'Green Pillar', elsewhere.

This listing of cultivar names is a cumulative register. The first record in print of cultivar registration of some cultivar names has often constituted their first valid publication. The use of several different publications, instead of just one, was to establish priority of these new cultivar names as early as possible. Since several different publications have been used to validate registrations, this Bulletin fills the need for an updated standard reference of all internationally registered *Ilex* cultivar names.

The first publication of a list of registering *Ilex* cultivars was "Descriptive List of Holly Registrations 1958 through 1965" by James R. Feucht, Holly Letter No. 27, p. 9-15, 1966. The next list was "*Ilex* Cultivar Registration List, 1958-1973" by Gene K. Eisenbeiss and Theodore R. Dudley, Holly Society of America Bulletin No. 13, 1974, followed by "*Ilex* Cultivar Registration List, 1958-1983" by Gene K. Eisenbeiss and Theodore R. Dudley, Holly Society of America Bulletin No. 20, 1983. This new list is a corrected and updated revision. Future documents of this type are planned and will be published at periodic intervals.

The Holly Society of America became the International Registration Authority for cultivated *Ilex* in 1958 by appointment from the International Commission for Nomenclature of Cultivated Plants of the International Union of Biological Sciences. It is interesting to note that from 1948 to 1958 a committee of the American Association of Nurseryman, Inc., registered names of cultivated *Ilex* and other plants. It was the practice of this organization to publish their registrations of cultivar names in the Proceedings of their Annual Conventions. On one occasion, publication of registered names also occurred in "Woody Plant Register List No. 1" reprinted from the Proceedings of the 74th Annual Convention, July 18-21, 1949. It is to be noted that some *Ilex* cultivar registrations by the American Association of Nurseryman were published without descriptions. Registration numbers assigned were sometimes published without plant names of any kind, and some cultivar names that had been accepted for registration and assigned registration numbers were never published. Some registered cultivar names of *Ilex* occurred in all of these categories. Furthermore, their registrations were not of an

appointed international authority and as such are not included in the present list unless they were subsequently registered with the Holly Society of America. In spite of these shortcomings, it is significant that the need for stabilization, validation, and protection of cultivar names was recognized at a time prior to the first edition of the International Code of Nomenclature for Cultivated Plants 1961 and before the appointments of international registration authorities existed. All woody plant registration by the American Association of Nurserymen ceased in 1959.

A checklist of all cultivated *Ilex* currently being prepared by the Holly Society of America will include, in detail, all of the American Association of Nurserymen *Ilex* cultivar registrations and all Holly Society of America registrations, as well as all unregistered cultivar names found in the literature. Parts of this checklist have been published as "International Checklist of Cultivated *Ilex*, Part 1, *Ilex opaca* L." by G.K. Eisenbeiss and T.R. Dudley, U.S. National Arboretum Contribution No. 3, 1972, and "International Checklist of Cultivated *Ilex*, Part 2, *Ilex crenata* Thunberg ex J.A. Murray" by T.R. Dudley and G.K. Eisenbeiss, U. S. National Arboretum Contribution No. 6, 1992.

Since 1983, eighty-five registrations have been added. The total number of formal registrations since 1958 is now 296. The greatest number of registrations continues to come from the private sector. The number of new cultivars of interspecific hybrids continues to increase.

FORMAT

The format of this cultivar registration list remains unchanged from the previous edition. Cultivar names are keyed to registration numbers, which are in chronological order. Included are species names or hybrid parentage, cultivar name, date of registration, registrant and address at the time of registration, and the place and date of original publication of the registration. The index gives cultivar names in alphabetical order with a page reference. An appendix has been added which gives cultivar names, with registration number, under their respective parent species or hybrid formula.

Although the primary concern of this registration list is cultivar nomenclature, it may benefit users and future registrants to have a list of *Ilex* species, including their authority citations, previously identified as parents of registered cultivar names. These species are as follows:

- I. × altaclerensis* (Loudon) Dallimore
(*I. aquifolium* L. × *I. perado* Aiton)
- I. aquifolium* L.
- I. × aquipernyi* Gable ex Wister
